

## Context Plus Main-Reserve Switch

**Product Code: CP60911/CP50195-1**

Main-Reserve Switch Part CP60911/ CP50195-1

*The Main-Reserve selector switch is a means of transferring of the electrical supply from the main cylinder to the reserve cylinder, Part Number CP60911/CP 50195-1. The Main to Reserve Switch is used with systems that incorporate both a main and a reserve (back-up) clean agent cylinder. The Switch has two independent Dry Contacts (Common/N.C. and Common/N.O.) that switch separately to avoid any interference from another system.*

*Following a system discharge, a reset of any field devices must be done and the main Extinguishant fire panel should be reset to normal protection mode. Once all the devices are in a stand-by status, the Main-Reserve Switch may be moved to the "Reserve" position. The empty Main cylinder can then be removed for recharge.*
